American Farmland Trust is a private, nonprofit conservation organization founded in 1980 to protect the nation's agricultural resources. AFT works to stop the loss of productive farmland and to promote farming practices that lead to a healthy environment. Its action-oriented programs include public education, technical assistance in policy development and direct farmland protection practices. Basic annual membership is \$20. For membership information, contact the National Office. For general information about AFT, contact the National Office or connect to AFT's homepage on the Internet: *http://www.farmland.org*. For information on Cost of Community Services studies, contact the Northeastern Office.

American Farmland Trust National Office 1920 N Street, N.W. Suite 400 Washington, DC 20036 (202) 659-5170 (202) 659-8339 fax American Farmland Trust Northeastern Office Herrick Mill One Short Street Northampton, MA 01060 (413) 586-9330 (413) 586-9332 fax

This study was commissioned by the AgriFuture Roundtable, a broad-based community group created in 1996 to strengthen Frederick County's agricultural industry by ensuring that agriculture remains an economically viable industry and guaranteeing that resources—such as land, water and the farming infrastructure—are available to support the agricultural industry. For information about the AgriFuture Roundtable, or to order a copy of this report, contact the Chamber of Commerce of Frederick County.

PHOTO BY RALPH ADKINS For the Univ. of Md. Cooperative Extension Service would like to thank the numerous public officials in the County of Frederick, Frederick City, Burkittsville and Walkersville who provided me with and explained the financial records for their departments and agencies.

I am also grateful to the AgriFuture Roundtable Steering Committee for its guidance in conducting this study. Committee members are Frances Baker, Timothy Blaser, David Gray, Joe Lebherz, Richard Ramsburg, Eric Rice, Marty Rice, Belinda Teague Levy and Michael Wilcom.

Finally, thanks to project manager Jill Schwartz, and Julia Freedgood, Joyce Peterson and Bob Wagner, all of American Farmland Trust, for their invaluable assistance during the study and with the draft and final review of this report.

Respectfully submitted,

Janet Carpenter

Thanks are also due to the following valuable contacts and officials who granted interviews:

#### In the County of Frederick:

Sam Andalora, Information and Business Manager, Social Services Department Gwen Blacklin, Office Clerk, Assessments James Bowes, Health Officer Terri Brown, Accountant Douglas Browning, Finance Director Alice Cooper, Housing and Community Development Director Marty Crabbs, Vice President for Finance, Frederick Community College Faye Culwell, Accountant Jack Dale, Superintendent of Education Bill Dennis, County Manager John Droneburg, Public Safety Director Earl Eyler, Parks and Recreation Director Lois Filby, Treasurer Jim Gangawere, Senior Accountant Mike Gastley, Senior Accountant Robert Hayes, Public Works Director Ken Henschen, Investment Manager Sarah Hoffman, Planning Analyst Sam Householder, Drafting Supervisor lan Hudak, Highways and Transportation Bureau Chief Charles Keller, County Clerk Hal Keller, Executive Director of Fiscal Services, Board of Education Tom Lupp, Gypsy Moth Control Agent Andy Marsh, Fire and Rescue Services Deputy Director Dolores Maminski, Associate Director of Libraries Stephen Mood, Social Services Director Amy Moore-Eubinag, Draftsperson Beth Pelle, Associate Director of Libraries Paula Phillips, Permits Supervisor

Terry Poole, Cooperative Extension Agent Lydell Scott, Human Relations Director Mary Alice Shankle, Deputy Clerk Jim Shaw, Planning Director Jim Singleton, Economic and Community Development Commission Director Margo Smith, Health Administrator Neil Spiller, Section Head, Traffic and Transportation Michael Stovall, Citizens' Services Director Mark Sweadner, Budget Officer Randy Waesche, Central Alarm Director Doris White, Supervisor of Assessments

# FREDERICK COUNTY IS IN WESTERN MARYLAND

5

#### EXECUTIVE SUMMARY

Frederick County is one of the most important agricultural counties in Maryland. Piedmont soils, an abundant water supply and a strong commitment to family farming allow the county to make a mark for itself in the agricultural industry. In the 1800s, the county was the largest wheat producer in the nation and, since World War I, it has been the largest dairy producer in the state, accounting for nearly onethird of Maryland's total milk production.

Snow covers farm in northern Frederick County.

> PHOTO PROVIDED BY PENNSYLVANIA FARMER MAGAZINE

With approximately 1,350 farms on more than 222,000 acres<sup>1</sup>, farmland dominates the landscape in Frederick, the largest county in Maryland. Other unique and valuable natural resources, such as the Monocacy River and Catoctin Mountains, add to Frederick's special character.

Development pressure is strong in Frederick County because of its rural charm, combined with a multitude of natural resources and accessibility to Washington, D.C., Baltimore, Md., and quickly growing business centers along Interstate 270 in neighboring Montgomery County. The county's population grew 110 percent, approximately 94,000 people, between 1970 and 1996.<sup>2</sup> The demand for development, particularly sprawling residential development, is forcing the county to make many difficult land use decisions. Perhaps the hardest decisions to make are those associated with residential growth.

This is a common trend throughout the country. Suburban developments are proposed, advocated and approved based on the argument that expanding the tax base will reduce local property taxes. Among other things, this has led public officials to believe that the key to making the local economy strong is building new homes and businesses, and has led property owners to oppose tax relief programs for farmland.

In response, American Farmland Trust, a private, nonprofit conservation organization, has developed an inexpensive and easy-tounderstand way to evaluate existing contributions of land uses. Cost of Community Services studies reorganize local financial records to determine the net effect of various land uses in a single fiscal period. COCS studies compare costs and revenues from residential, commercial and industrial sectors, and farms, forests and open lands to provide a snapshot of the financial contributions of current land uses to local governments. In 11 COCS studies in the Northeast, Ohio and Minnesota, AFT has found that any apparent gain in tax revenue from residential development was lost when the cost of delivering necessary public services—from roads, sewers and parking lots to education and public safety—was considered. Based on these studies and interest in finding out if this pattern would hold in Frederick County, the Frederick County AgriFuture Roundtable hired AFT to conduct a COCS study in the county. This is the first COCS study done by AFT in the Mid-Atlantic.

In the Frederick County COCS study, AFT focused on the county budget for the 1995 fiscal year. The majority of the land within Frederick County lies outside the incorporated municipalities, and all expenses and revenues related to the land uses in the unincorporated area are included in the county budget. AFT found that, in the county budget, the ratio of dollars generated by residential development to services required was 1:1.14. In other words, for every dollar raised from residential revenues, the county spent \$1.14 in direct services. On the other hand, the ratio for farmland and open space was 1:0.53-for every dollar raised from farmland and open space revenues, the county spent 53 cents in direct services.

Although the majority of land in Frederick County lies within the unincorporated area, AFT and the AgriFuture Roundtable wanted an understanding of the revenues and expenses related to land uses within the municipalities. Three municipalities were chosen for this study: Frederick City, Walkersville and Burkittsville, which represent a large, medium and small municipality, respectively. In the Frederick City and Burkittsville studies, the results reinforced the results from the primary study. In both cases, the cost to service residential land uses was higher than the cost to service farmland and open space. The ratio for residential land uses was 1:1.02 in Frederick City and 1:0.60 in Burkittsville, while the ratio for farmland and open space was 1:0.38 in Frederick City and 1:0.33 in Burkittsville. The results for Walkersville were atypical: a ratio of 1:0.96 for residential and 1:0.97 for farmland and open space.

SUMMARY OF FINDIN	NGS (IN DOLLAF	RS)	
	Residential	Commercial & Industrial	Farmland & Open Space
County of Frederick	1:1.14	1:0.50	1:0.53
Frederick City	1:1.02	1:1.21	1:0.38
Walkersville	1:0.96	1:0.50	1:0.97
Burkittsville	1:0.60	1:0.27	1:0.33

#### INTRODUCTION

Frederick County, Maryland, was settled in the early 18th century by European immigrants drawn to its agricultural resources and convenient location along major travel and trade routes. The county was established by the Maryland Provincial Assembly in 1748, encompassing an area that stretched between what are now Garrett and Carroll counties and extended as far south as the District of Columbia. Successive boundary changes, the last in 1937, gave the county its current form. Today, Frederick is the largest county in the State of Maryland, comprised of approximately 665 square miles or 425,047 acres.<sup>3</sup>

Frederick County has traditionally supported a successful agricultural sector. In 1790, it was the largest wheat producing county in America. As the national and regional economies developed and changed over time, production in Frederick County shifted away from grains and toward the dairy industry. Since World War I, the county has become the state's leading dairy producer, accounting for nearly one-third of the state's total milk production in 1995.<sup>4</sup> One-fourth of the land in Frederick County is classified by the United States Department of Agriculture as prime farmland.<sup>5</sup> The annual value of agricultural products sold is approximately \$109 million.<sup>6</sup>

Source: Census & Fred. Co. Planning Dept.

The county is undergoing a transition away from agriculture and toward a more urban setting. With Interstates 270 and 70 providing a convenient link to the metropolitan regions of Washington, D.C., and Baltimore, Md., both 50 miles away, the natural beauty and charm attributable to the county's agricultural history now attracts workers from both cities who are seeking a quiet place to live. Commercial and industrial businesses also are coming to Frederick at a more rapid pace, as they are to all the communities along the quickly developing Interstate 270 corridor. From 1980 to 1995, the number of jobs in the county increased by approximately 31,000, or 103 percent.7

Population growth is one consequence of these changes. In the 1970s, the county's population increased by an average of 3,000 persons per year. In the 1990s, growth is occurring at a rate of 5,300 people per year. The county's population reached 178,639 by the beginning of 1996, representing an increase of 110 percent since 1970.8 Although the county is growing at a slower pace than some other counties in Maryland, between 1995 and 2015 the county is projected to grow at a faster rate than all other counties in the Washington, D.C., Metropolitan Region, a region defined by the Metropolitan Council of Governments. This region includes Frederick, Montgomery, Prince Georges and Charles Counties in Maryland, as well as several counties in Northern Virginia.9

Housing construction associated with population growth often results in land being taken out of agricultural production. Since 1967, approximately 30,000 acres of Frederick *County's agricultural land has been converted* to other uses.<sup>10</sup> The loss of farmland is expected to continue. The Maryland Office of Planning projects that the acres of Frederick *County land devoted to agricultural uses will* decrease from 246,635 in 1990 to 226,801 by 2020, representing an 8 percent decline. Residential land use is projected to increase almost 56 percent, from 42,717 acres to 66,417 acres, during the same period.<sup>11</sup>

In an effort to slow the loss of farmland in Frederick County, the state and county offer several incentives for farmland owners to continue farming their land, rather than sell their land for development. The most popular incentive program is the Maryland Agricultural Land Preservation Foundation's Purchase of Development Rights program, a voluntary program administered by the state and funded by state and county dollars. Through the PDR program, willing landowners can sell agricultural conservation easements to the state. Easements are legally recorded deed restrictions limiting the type of development that can occur on the land. The value of the easement is usually equivalent to the difference between the land's agricultural value and its development value, although most landowners discount this value in an effort to increase the chances of the state making an offer to buy the easement. As of the end of 1996, the state held easements on 55 Frederick County farms comprising more than 9,784 acres.<sup>12</sup> A prerequisite to selling an easement is creating an agricultural preservation district for a minimum of five years. District land can only be used for agricultural use. More than 130 farms and 19,622 acres were designated as agricultural preservation districts at the end of 1996.13

The county administers a PDR program called the Critical Farms Program. This program, started in 1995, allows the county to purchase options to acquire easements on farms that are being sold to full-time farmers. The farmer must apply to sell the easement to the state. The county retains the right to the easement if the application is rejected by the state. Through this program, the county holds four easements on 413 acres of farmland.

Another tool used by the county to protect farmland is agricultural zoning. Zoning regulations limit the development in the rural areas of the county—63 percent of the county—to three lots plus one remainder on any parcel that existed as of August 18, 1976. Additional lots are permitted on tracts larger than 25 acres at a ratio of one lot per 50 acres, as long as the development is clustered.

The Maryland Economic Growth, Resource Protection and Planning Act is also designed to protect farmland. The act, approved by the legislature in 1992, encourages economic growth, limits sprawl and protects the state's natural resources and environ-

ment. The county has committed itself to these objectives in its countywide comprehensive plan, most recently updated in 1990. The goal of the plan is to encourage a concentration of growth in and around existing communities, so as to preserve the agricultural character and natural resources of the county and reduce the cost of providing public

resources and facilities.<sup>14</sup> Although this is an important first step for preserving the county's agricultural industry, several limitations—such as funding—are making it difficult for the plan to become a reality.

The AgriFuture Roundtable is addressing the challenge of making the comprehensive plan, as well as other farmland preservation proposals being discussed, a reality. The AgriFuture Roundtable is a broad-based community group created in 1996 to strengthen the county's agricultural industry by ensuring that agriculture remains an economically viable industry and guaranteeing that resourcessuch as land, water and the farming infrastructure—are available to support the agricultural industry. The AgriFuture Roundtable's first major project is painting an accurate picture of the agricultural industry's importance from an economic standpoint. As part of this effort, the Roundtable hired American Farmland Trust to conduct a Cost of Community Services study. The Roundtable's Steering Committee provided guidance and input to AFT as it conducted the study.

AFT is a private, nonprofit conservation organization founded in 1980 to protect the nation's agricultural resources. AFT has developed an inexpensive and easy-to-understand method of evaluating the current net effect of various land uses on local government budgets. Called COCS studies, these studies reorganize local financial records to trace the flow of rev-

Cow and calf on a farm outside of Libertytown in Frederick County. PHOTO BY RICHARD RAMSBURG enues and expenditures generated by different land uses. The results provide a snapshot of the relative contributions of different land uses.

The Frederick County COCS study looked at the fiscal year 1995 budgets for the County of Frederick, Frederick City and the townships of Burkittsville and Walkersville. The year 1995 was chosen because it was the most recent year with complete financial records. The different levels of government were studied because they represent the variety of settings in the county from rural to urban—and, therefore, the variety of expenses and revenues associated with different land uses.

Farmland dominates the landscape in Middletown Valley, home of Burkittsville.

The study focused on the County of Frederick budget because it represents revenues and expenditures associated with the unincorporated area of the county, an area that covers approximately 65 percent of the county, as well as some of the funding associated with the incorporated areas. The remaining 35 percent of the land base lies within the county's 11 jurisdictions, three of which are Frederick City, Burkittsville and Walkersville. Each jurisdiction has its own budget.

Frederick City, incorporated in 1817, is the historic center of the county. Through local efforts, the vitality and character of the downtown has been maintained. With its colonial buildings, quaint streets and numerous antique stores, the city is a tourist attraction. Located at the junction of four expressways, the city hosts the county government as well as many state offices and is one of the areas where much of the county's growth is occurring. During the 1980s, the city's population increased by almost 40 percent, from approximately 28,000 people to 40,000 people. By 1990, the city's population represented 27 percent of the county's total population.<sup>15</sup> In the last 20 years, the city annexed land to grow an additional four square miles.

The Town of Walkersville is located northeast of Frederick City. The town grew out of two separate villages, Georgetown and Walkersville, that were located on 18th-century farm-to-market roads, and eventually was incorporated in 1892. Walkersville is another area of the county that has experienced rapid growth in recent years and is expected to continue to attract commuters from the Washington, D.C., and Baltimore, Md., areas. Between 1970 and 1990, the town's population more than tripled, and is now estimated at 4,532 people.<sup>16</sup> The town's population is expected to almost double before 2010, due to both new housing construction and annexation.

Located in the Middletown Valley on the western side of the county, Burkittsville retains its historical character as a pioneer town settled in the 1700s. Burkittsville is designated as an historic village on the National Register of Historic Places and is one of seven areas designated as a Rural Historic Village by the State of Maryland. The village grew out of a farm owned by Henry Burkitt. The town has not changed much since those days. In 1870, the town's population was 293 people. Today it is estimated at 192 people. Population projections are viewed as irrelevant. New development is naturally limited by the town's natural heritage, surrounded by floodplain soils and shallow depth to bedrock. Also, the town has controlled growth by aggressively targeting its land preservation efforts so as to create a ring, or greenbelt, of permanently protected farms around the town's growth center. Also, Burkittsville currently has only private sewer and water systems, and development that would require updates to the

infrastructure is discouraged. Residents are committed to allowing development only in the style of the town's rural character.<sup>17</sup>

In this study, the financial records for the County of Frederick and each of the three jurisdictions were reorganized to determine the net contribution to local governments of three land use categories: farmland and open space, commercial and industrial, and residential. In each budget, farmland and open space contributed more in revenues than they required in services. Local governments generally use this surplus toward serving other land uses.

It is important to recognize the difference in the services provided by each of the jurisdictions. The county provides all of the services in the unincorporated areas, and some in the municipalities. For example, the school system for the entire county is run by the Board of Education and is primarily funded through a transfer of money from the county's general fund. Municipality budgets do not include any revenues or costs for schools. Additional funding comes from the state and federal governments, as well as cafeteria lunch sales. Only the portion of the Board of Education's budget that is funded by the county is included in this study.

The services provided by each of the municipalities differ. Table 1 summarizes the services provided by each of the three municipalities considered here. Although some of the discrepancies between the municipalities are due to their level of service, the county compensates municipalities that provide duplicative services through its tax equity program. In other words, if a municipality provides such services as police, bulk trash, and parks and recreation, the county may reimburse the municipality for those services because the county would have had to provide those services in the absence of the municipality.

Eight of the municipalities receive planning services from the county, while three provide this service independent of the county but receive some technical assistance from the counties. Thus, the planning efforts of all the municipalities are coordinated with the county. As part of the county's comprehensive plan, eight regional plans also are developed, encompassing the entire county. The municipalities coordinate with the county to ensure a unified planning process.

In addition to the jurisdictions mentioned above, the county also has several special taxing districts for the provision of fire and rescue services. These funds are raised through an additional property tax paid by residents in these districts. Frederick City is the only municipality included in this study that has a special fire tax district. Those funds were included in this analysis.

This report is organized into four main sections: Methodology, Study Area Reports, Findings and Discussion. The Methodology section explains the research steps and how the financial records were reorganized to reflect the land use categories defined by the studies. The Study Area Reports section provides details on the specific issues involved with each jurisdiction. The Findings section reports on and compares the results for the county and the municipalities. Finally, the implications of the results are explored in the Discussion section.

#### METHODOLOGY

Residential development and agriculture compete for land in Braddock Heights, one of the fastest growing areas of Frederick County.

PHOTO BY STAN FULTZ

COCS studies reorganize government financial records to match the flow of revenues and expenditures with specific land uses. In doing so, COCS studies provide valuable information to local officials by showing how land use decisions affect local government budgets.

The initial step in a COCS study is to identify and classify land uses. Definitions depend on the mix of land uses and the availability of data. After discussions with the AgriFuture Roundtable Steering Committee and local officials, and a review of Maryland's property tax classification system, three land use categories were defined for this study: residential, commercial and industrial, and farmland and open space. Farm houses are assessed by the state as residential property, facilitating the allocation of these properties into the residential category. Commercial and industrial categories of properties overlapped in the assessment records, making their separation into individual categories too difficult for purposes of this study.

The second step is to decide which local governments to include and then to collect relevant financial records from them. For a complete accounting of the effects of land use decisions on the finances of Frederick County governments, it would be necessary to include the county and all 11 municipalities. However, the time and resources necessary to accomplish such a task were not available for this study. Instead, three municipalities were chosen as representative of the variety in size and character in the county. Although not all local funds are included in this analysis, the information gained provides insight for the entire county.<sup>18</sup> The coordination of planning between the county and municipalities contributes further assurance of the applicability of results to other areas of the county.

The next step is to allocate revenues and expenditures to the land use categories. The financial data used in this report came from each of the jurisdiction's financial statements for fiscal year 1995, the most recent year for which records had been compiled at the time of this report. The breakdown of property tax revenues into land use classes was available from the state's Office of Assessments. Fourteen of the 10 categories used by the state were grouped into the three land use categories mentioned above. All agricultural land within the farmland and open space category is actively farmed land that is larger than five acres and is assessed at the value of its current use, rather than the value of its potential use for development. Other revenues and expenditures were broken down based on interviews with local officials and other available records. Details on the methods used to break down specific revenues and expenditures are provided in the next section of this report.

After all the revenues and expenditures have been categorized into the appropriate land use classes, the last step is to compute ratios for each land use. Results of these calculations are presented in the Findings section. he Frederick County general fund realized more than \$170 million in revenues in 1995. The largest revenue stream was \$84 million in property taxes paid by county landowners. The general fund was the only portion of the county's finances considered here because other funds, such as the enterprise funds and capital projects fund, were primarily supported through state or federal grants, user fees or bonds. For the purposes of this study, limiting consideration to the general fund was appropriate because, since these funds are derived from property taxes, they are most closely related to land uses.

It is important to note that most of the other funds receive substantial portions of their funding from the general fund, and those amounts are included as general fund expenditures. For example, the general fund contribution to the capital projects fund represented more than 25 percent of the total revenues for the capital projects fund, with bonds accounting for most of the balance. The Board of Education, an entity separate from the county government, receives approximately half of its funding from the county's general fund, with the state making the next largest contribution.

County property tax revenues were allocated to the three land use categories according to the state assessor's records. Taxes paid on residential properties amounted to 74 percent of property tax revenues, compared to 21 percent for commercial/industrial and 5 percent for farmland and open space. Other revenues were classified with the assistance of local officials. Where possible, revenues were categorized according to who paid for that particular item. Grants from the state and federal governments were classified according to how they were intended to be spent. Revenues for all jurisdictions studied are provided in the appendix.

County expenditures were allocated with information gathered from interviews with the heads of the relevant departments. General government expenditures that serve all land uses were broken down in the same proportion as property tax revenues because they were not closely associated with any particular land use. School expenditures were allocated entirely to the residential category because residents, not business workers or farm animals, directly demand these services. Public safety expenditures were divided according to a sample of the calls made. Planning and zoning, public safety, public works and public health departments all were allocated based on the best judgment of the department heads. Expenditures for all jurisdictions studied are provided in the appendix.

The incorporated areas of the county were not the focus of this study because the majority-65 percent-of the county's land base is unincorporated. However, the budgets for three of the county's 11 municipalities were included in the study to provide a sampling of the revenues and expenditures related to the incorporated land. A study of these budgets was different than previous studies of budgets done by AFT for a variety of reasons, the most important of which is that the three jurisdictions do not pay for schools. As noted above, all school costs are included in the County of Frederick's budget.

Frederick City was the largest jurisdiction studied, collecting more than \$29 million in general fund revenues in 1995. Only the city's general fund was considered in this study because, as in the county, other funds were supported either by state or federal grants, user fees or bonds. Property tax revenues were derived primarily from residential properties, which accounted for approximately 68 percent of revenues, compared to 32 percent for commercial/industrial and 0.09 percent for farmland and open space. The small amount of agricultural revenues stems from the fact that the only agricultural land in the city is land recently annexed for development. The city receives a contribution from the county through the tax equity program for the police, bulk trash, and parks and recreation services it provides in lieu of the county providing these services.

Bob Black picking apples at his Frederick County orchard. PHOTO BY RALPH ADKINS For the Univ. of Md. Cooperative Extension Service Frederick City is one of the six fire tax districts in the county. Revenues for the district are levied in addition to the county and city property taxes, based on assessed property value. Nearly \$3 million was collected for the city's fire companies in 1995. These revenues were allocated to the three land use categories in the same manner as the city's property tax revenues were allocated. Fire and rescue services were allocated based on a sample of calls.

Visitors picking strawberries at Glade Link Farms in Walkersville, Md.

PHOTO BY RALPH ADKINS For the Univ. of Md. Cooperative Extension Service

Walkersville is a considerably smaller community than Frederick City. Total revenues in 1995 totaled \$1.1 million. Residential properties supported 51 percent of property tax revenues, compared to 49 percent from commercial/industrial and less than 1 percent from farmland and open space. The town provides police service to residents and businesses through a contract with the state for three resident troopers. The volunteer fire and ambulance departments each receive a donation from the town general fund because the county provides for operating expenses. Fundraising events and other private donations also support the departments. Residents receive trash pickup through a contract with a private trash company. Walkersville also receives a tax equity contribution from the county for its provision of police services and parks and recreation facilities.

Burkittsville is an even smaller rural community with total revenues of just over \$30,000. Eighty-three percent of property tax revenues come from residential property, compared to 9 percent from commercial/ industrial and 8 percent from farmland and open space. Burkittsville depends on the county for the provision of most services, including fire and police protection. The town provides parks and recreation service to its residents, for which it receives tax equity money from the county.

n Frederick County, farmland more than paid its way in tax revenues during fiscal year 1995. This is a typical COCS study finding. The study of the County of Frederick budget concluded that residential expenditures exceeded revenues by almost \$20 million, resulting in a ratio of revenues to expenditures of 1:1.14. In the county's budget, the negative contribution-or shortfall-of residential land use was offset by a surplus of revenues over costs arising from commercial and industrial parcels, as well as farmland and open space parcels, which both contributed more than twice as much in tax revenues as they required in services. Although the ratio does not appear to be large, with residential expenditures almost 92 percent of the total, commercial, industrial, farmland and open space uses are left with a large burden in comparison to their relatively small share of the budget.

Frederick City, Walkersville and Burkittsville generally followed this pattern, thereby supporting the results from the primary study-the study of the county budget. Several results for these jurisdictions were atypical: The ratio of revenues to expenses for commercial and industrial land uses in Frederick City was higher than usual for COCS studies done by AFT, the ratio for farmland and open space land uses in Walkersville was higher than usual, and all land uses in Walkersville and Burkittsville cost less to service than they paid in tax revenues. It is important to not let these atypical findings outweigh the findings from the study of the county budget. The county budget was the most significant budget studied because it was the largest budget, and it included all education costs for the county (including the jurisdictions studied) and the costs for a variety of other services provided to the jurisdictions. A summary of the breakdown of revenues and expenditures by land use category for all areas studied is in Table 2.

In the City of Frederick, the results for farmland and residential land uses were similar to those in other COCS studies. For agriculture, there was an expenditure of \$0.38 for each dollar of revenues generated. For residential parcels, the cost was \$1.02 for every dollar of revenues generated. As in the County of Frederick budget, the residential land use shortfall was offset by the surplus of revenues over costs arising from farmland and open space parcels. However, the results for commercial and industrial land uses were atypical. Like residential land use, the commercial and industrial land uses contributed less in revenues than they required in services. The ratio for commercial and industrial land uses was 1:1.21. In no other COCS studies done by AFT throughout the nation has the ratio for this land use been greater than one. This is the first COCS study to include a budget for a region where the dominant land use is commercial/industrial, a land use that can require a lot of services. In Frederick City, the police

department spent 46 percent of its time and the fire department spent 51 percent of its time providing services to businesses during the study year. Services included responding to alarms (approximately 90 percent which were false alarms), thefts, shoplifting and disorderly conduct at bars, as well as providing bank escorts

Some of the results for Walkersville were atypical. Unlike other COCS studies,

highest ratio for the municipality: 1:0.97 for farmland and open space, compared to 1:0.96 for residential and 1:0.50 for the commercial and industrial land uses. The ratio for farmland and open space was not the result of these land uses requiring a relatively high amount of services. Expenditures for farmland and open space were \$5,100, representing less than 1 percent of the total budget. In comparison, expenditures for the residential land use category totaled \$712,057, representing almost 80 percent of the total budget. The high ratio, rather, is due to the relatively small amount of revenue—\$5,282—that is attributed to the

the ratio for farmland and open space was the

# TABLE 2. SUMMARY OF REVENUES AND EXPENDITURES BY LAND USE CATEGORY IN THE COUNTY OF FREDERICK, FREDERICK CITY, WALKERSVILLE AND BURKITTSVILLE (GENERAL FUND ONLY)

GRAND TOTAL	42,828	24,050	18,778	

farmland and open space category. Most notably, only \$70 of a \$85,019 payment to the municipality from the county for police services is attributed to this land use category because only two of the 1,343 calls the police responded to in Walkersville during the study year were in the farming/open space community.

The Walkersville budget for the study year included a \$114,373 grant from the Maryland Department of Natural Resources Program Open Space for the creation of a park in the municipality. Approximately half of this grant was spent during the study year. However, the revenue and costs related to this park were not included in this study because they do not represent a typical money flow for Walkersville. COCS studies are most accurate if they pertain to a budget year that does not include onetime costs or income, such as money associated with the construction of a new school or roadway. Walkersville does not typically receive grants of this size from the state for creating parks or preserving open space. Also, the funding associated with this grant was not included in the study because the focus of COCS studies is private land, not public land.

A final atypical finding in Walkersville is that none of the land uses required more in services than they contributed in revenues. In other words, all ratios fell below one. This occurred because Walkersville operated with a surplus of more than \$218,000 during the study year. The municipality had budgeted a surplus of \$63,000, but it grew due to unanticipated increases in revenues from property, income and highway taxes.

Burkittsville also operated with a surplus. Burkittsville generally runs a surplus that is used to pay for large capital projects when needed, but the surplus for the study year was higher than usual for Burkittsville. The \$18,778 surplus kept ratios in all land use categories below one. However, the findings for Burkittsville are typical in that residential land use was the most costly to service and farmland and open space demanded considerably less for services. This is significant because Burkittsville spends more than 90 percent of its budget to serve its residential properties.

## DISCUSSION

COCS studies are snapshots in time that offer local officials and citizens a new perspective on land use relationships. By assessing the financial contribution of various land uses, COCS studies give communities a baseline of budgetary information that can be useful in determining how the community should grow.

COCS studies differ from fiscal impact studies because COCS studies analyze the current contributions of various land uses, rather than projecting the future costs of services incurred by new development. COCS studies also analyze the fiscal contribution of natural resources, such as farmland and open space, which fiscal impact studies generally do not do.

All COCS studies performed to date by AFT or other researchers have found the same general pattern. Table 3 provides a summary of results from all of the studies, including the Frederick County study. As a rule, farmland and open space clearly make a positive net financial contribution on the tax roles. This holds true even though agricultural land generates little revenue, primarily because agricultural land is assessed at the value of its current use instead of the value of its potential use for development. Maryland was the first state in the nation to tax agricultural land in this manner. In 1957, Maryland initiated a use-value assessment program. By 1996, every other state in the nation had adopted similar programs. These programs share broad goals, including slowing the loss of farmland and forestland and more equitably distributing property tax burdens. Their designers also recognize that opposing farmland retention programs is not going to solve fiscal problems.

The commercial/industrial sector also shows a positive net impact, but local officials should be wary of pursuing it simply to enhance the tax base. They should consider these questions: What happens when local skills are not available to fill the jobs created by new businesses? Will new houses be needed for the people who move to town to take the new jobs? Will the cycle continue?

With a few exceptions, the studies of the County of Frederick, Frederick City, Burkittsville and Walkersville budgets followed this trend. It is interesting that the same general pattern was found in the Frederick County COCS study even though this study was different from all of the COCS studies done by AFT. Most important, unlike other studies, the revenues and expenditures for education were not included in all the budgets that were studied. They were only included in the County of Frederick budget because the county funds all education, even in the incorporated areas. Even without this budget item, residential land still

required the highest proportion of services in Frederick City and Burkittsville, compared to farmland/open space and commercial/industrial land uses. Education costs are generally what create the large disparity between residential and farmland uses, because the cost to send children to school is typically one of the highest costs for the residential sector. It is interesting to note that, in Frederick County, the school costs are not as high as they actually should be. More than 50 percent of the county's schools are operating at more than 100 percent of their stateapproved student capacities.19 If the county were to provide

the required amount of classroom space, education costs would be even higher.

This study is different from other COCS studies, too, because of Frederick County's unique government structure. The structure is unique, strictly in relation to other communities studied previously by AFT, because Frederick County has one county government that provides services to the unincorporated areas of the county as well as some of the incorporated areas. The county also has 11 incorporated jurisdictions, each which has its own budget. Therefore, even though the majority of the land in Frederick County is unincorporated, it is irresponsible to entirely ignore the budgets for the incorporated areas. That is what led AFT and the Roundtable to choose a sampling of jurisdictions-one small, one medium and one large-in this study. The findings from these jurisdictions, however,

Ron Holter cutting silage at his Frederick County farm.

PHOTO BY RALPH ADKINS For the Univ. of Md. Cooperative Extension Service

Cows heading into a barn for milking at a farm near Middletown in Frederick County. PHOTO BY PENNSYLVANIA FARMER MAGAZINE

should not outweigh the findings for the county because the county's general fund budget of approximately \$175 million is more than five times greater than the combined budgets for Burkittsville, Walkersville and Frederick City.

Taken together, the findings begin to dispel several myths:

• Residential development will lower property taxes by increasing the tax base.

■ Farmland gets an unfair tax break when it is assessed at its actual use for agriculture instead of its potential use for development.

• Open lands, including productive farms and forests, are interim uses just waiting around to be developed to their "highest and best use."

In fact, it appears that keeping land in agriculture helps maintain financial balance in rural and urban-edge communities. Working land also can be appreciated for other economic contributions. As well as feeding us, agriculture provides jobs and supports other local businesses. Common estimates place the multiplier effect of local agriculture at \$3 to \$5 (e.g., for every dollar received from farmers for selling agricultural goods and services, \$3 to \$5 is earned by local businesses and processors serving farmers and their customers).<sup>20</sup> Farmland also provides benefits that are harder to quantify, such as wildlife habitat, cultural heritage and tourist opportunities.

COCS studies are not designed to be predictive, nor are they meant to judge the intrinsic value of one land use over another. However, the findings do suggest that farmland in Frederick County is an important contributor that is worthy of fiscal respect. While it may not generate enough to completely offset residential demands on municipal services, farmland on average adds more than twice as much to local coffers as it demands back in services. This is an important finding, especially given the context of rapid metro-area urbanization proceeding at nearly twice the rate of population growth.

By demonstrating that residential development can be a financial drain on Frederick County, this study by no means suggests that the county should slow or prohibit residential growth. Some degree of growth in Frederick County is inevitable and important. But if it is not balanced and sensible, the county may pay a high price. School overcrowding, traffic congestion, pollution, noise and expensive infrastructure are among the many costs of development.

In this light, farmland protection is financially beneficial to Frederick County. The county began recognizing the significance of farmland protection in 1982, when it opted to participate in Maryland's purchase of development rights program, and then in 1993, when it created its own PDR program. With more than 10,000 acres of farmland protected through the PDR programs, Frederick County is home to one of the best farmland protection programs in the country. However, the success of the Maryland and Frederick County PDR programs is limited by funding. Maryland's PDR program, for instance, has only enough funding to satisfy the demand of 9 percent of the people who want to sell easements to the state.<sup>21</sup>

The success of the program is also limited by the rapid development of Frederick County's agricultural land. Although the county is protecting some of its farmland, it is losing approximately three acres of farmland for every one acre it permanently protects through agricultural conservation easements. From 1982 to 1992, the county lost more than 21,000 acres of farmland,<sup>22</sup> while it permanently protected approximately 7,500 acres.<sup>23</sup>

In addition to the incentive-based PDR program, Frederick County also has taken a regulatory approach to protecting farmland. In 1991, the county adopted an Adequate Public Facilities Ordinance that directs growth in the unincorporated areas to where services are

provided. One jurisdiction has implemented a similar ordinance. But even with this type of ordinance, as well as density restrictions in the rural communities, farmland is still being lost at a rapid rate in Frederick County. This is occurring because many jurisdictions are annexing land so that the land is not subjected to the APFO. Also, the APFO only began to take effect in 1996 because developments that were already in the pipeline (i.e., permits were filed, site plans were being reviewed by the county) when the ordinance was adopted were not subject to the ordinance until five years after the ordinance was adopted. From 1991 to 1996, therefore, a rush of development occurred.

Given this context, Frederick County should explore ways to improve its existing farmland protection efforts and implement other types of techniques to retain farmland, such as property tax credits for land that is permanently protected by an easement. As COCS studies show, farmland more than pays its way in tax revenues. The county also should challenge the state to improve its farmland protection programs and policies. In 1978, Maryland initiated the country's first PDR program, which has been consistently ranked the best program in the country. Twelve states have since adopted similar programs. But despite its tax relief and PDR programs, Maryland is losing two acres of farmland for every one acre it permanently protects. The loss is due to an increase in development pressures coupled with a decrease in funding for incentive-based farmland protection programs and a decrease in the political willingness to implement regulatory-based farmland protection programs.

Farmland protection is on the agenda for several groups within Frederick County. Some support the protection of this natural resource because they appreciate the wildlife habitat provided by farmland. Others want to save farmland because of its value in floodplain and wetland protection; still others, because of its cultural value. The Frederick County AgriFuture Roundtable, a broad-based group of county residents and business people created in 1996, is making farmland protection one of its top priorities because it recognizes the economic value of saving farmland. The Roundtable commissioned this study to help state the case that farmland is worthy of fiscal respect. Members of the Roundtable hope that local decisionmakers will weigh all the advantages—but particularly the economic advantages—that farmland has to offer in the planning, zoning and public policy process. Supporting farmland protection and conservation can prove to be a sound community investment.

#### MISSION STATEMENT

The Frederick County AgriFuture Roundtable seeks to strengthen Frederick County's agricultural industry by ensuring that agriculture remains a viable industry and guaranteeing that resources—such as land, water and the farming infrastructure—are available to support the agricultural industry.

#### OBJECTIVES

• Achieve broad-based community representation on task force.

• Identify challenges the county's agricultural industry is facing, as well as the consequences of those challenges.

• Identify existing programs and policies that protect and endanger the county's agricultural resources and recommend how they can be modified so as to ensure that agriculture has a viable future.

• Identify programs and policies designed to strengthen the county's agricultural industry and recommend how they can be modified so as to ensure that agriculture has a viable future.

• Educate the community about the importance of agriculture and the challenges and potential solutions related to strengthening the county's agricultural industry.

• Develop an action plan to address the challenges the county's agricultural industry is facing.

• Fund and support appropriate research and studies, including a Cost of Community Services Study, designed to meet the goals of the task force.

• Achieve and maintain a balance of local natural resources for sustained agricultural use.
