

# Non-Operator Landowner Survey

## OHIO RESULTS

Little data exists on the millions of Americans who own and lease agricultural land but do not farm it themselves—people we call “non-operator landowners” or NOLs. American Farmland Trust’s mission is to protect farmland, promote sound farming practices, and keep farmers on the land. We cannot meet our mission without engaging this critical group of agricultural landowners. We have also found that NOLs are keenly interested in stewarding their land well, even if they aren’t farming it themselves.

In 2018, AFT began surveying NOLs across the country to increase our knowledge and understanding of how to serve this audience better. This fact sheet presents select survey findings for Ohio. For more information on the survey and our methodology go to [farmland.org/nolssurvey](http://farmland.org/nolssurvey). This survey is a project of AFT’s Women for the Land Initiative. For more information about the WFL program, check out our website [farmland.org/women](http://farmland.org/women).

### SELECT FINDINGS: LANDOWNERS

The landowners who responded to our Ohio survey tend to be

**senior**

**70**

AVERAGE AGE

with **past experience**  
operating a farm

**41%**

HAVE FARMED

**28%**

HELPED PARENTS FARM

**non-resident**  
on the land they rent out

**54%**

but living **nearby**

**15 miles**

MEDIAN DISTANCE AWAY

## SELECT FINDINGS: LAND

Generally, the landowners surveyed

**own**  
a median of  
**100**  
ACRES

of which  
they **rent** out  
**80**  
ACRES

use their land primarily for  
**crop** production  
**98%**

have  
owned the land for  
**decades**

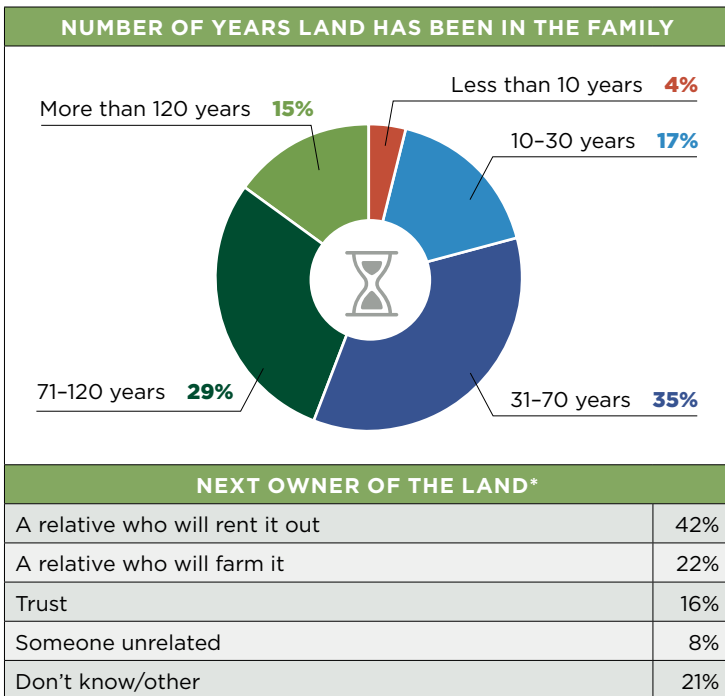

and are likely to  
keep the land in  
**family hands**

**Table 1. Key Landowner Stats**

FINANCIAL IMPORTANCE OF FARMLAND TO HOUSEHOLD*	
Immediate income and a primary source of household income	13%
Immediate income but not a primary source of household income	65%
Long-term real estate investment	36%
Estate-planning tool	21%

\* Could select multiple categories, thus results will not equal 100%

**Table 2. Key Land Tenure Stats**

\* Could select multiple categories, thus results will not equal 100%

In Ohio, we surveyed 338 non-operator landowners. We aimed to survey both men and women who own 25 acres of farmland or more. A primary goal of our research is to understand better the differences in the needs of male and female landowners, so we sampled men and women equally. We also eliminated trusts from our sample because of the difficulty of identifying the primary decision-maker to survey, and the inability to differentiate trusts by gender. This undoubtedly affected the results of our survey—one cannot determine the actual gender split in landownership from our data, and readers should keep in mind that we only surveyed individually- or partnership-owned lands, not institutions or trusts.

The majority (49%) of landowners rent their land to neighbors or friends of the family, while 31% rent to a relative or family member and the rest (20%) rent to someone who is not related nor a friend of the family. Interestingly, the majority (62%) of lease agreements are verbal and most are either a cash rent agreement with fixed or flexible payments (46%) or a crop share agreement (46%). Additionally, landlords have typically been renting their land to the same operator for a long time, with the median length of time being 17 years, representing long-lasting relationships between landowners and renters.

When evaluating their renter (current or potential), respondents were asked to consider a series of attributes that are somewhat or very important to them. Within the survey, a large number of attributes associated with their renter, including their trustworthiness to their reputation and their conservation philosophy and priorities were included. The six qualities that were most frequently cited as “somewhat” or “very” important appear in Table 3. (See the full list at [farmland.org/nolssurvey](http://farmland.org/nolssurvey).)

For information sources, those responding to our survey trust their farmer first and foremost for information. They are primarily interested in receiving information and/or technical assistance on water quality improvement and soil fertility improvement. (Table 4)

## SELECT FINDINGS: RELATIONSHIP WITH FARMER

Generally, the landowners surveyed

lease to  
**family, friend  
or neighbor**

80%

through a  
**verbal** agreement

62%

**long standing**

17 years

MEDIAN

with an  
**annual** term

73%

and they overwhelmingly  
**trust** their farmer to make good  
**conservation** decisions

93%

**Table 3. Qualities Most Frequently Cited as “Somewhat Important” or “Very Important” when Evaluating Current or Potential Farm Operators**

MOST IMPORTANT OPERATOR CHARACTERISTICS	
Trustworthiness	97%
They care about my land	97%
Ability to maintain soil productivity	96%
Reputation as a good farmer	96%
Ability to avoid soil erosion	95%
They are financially responsible	95%

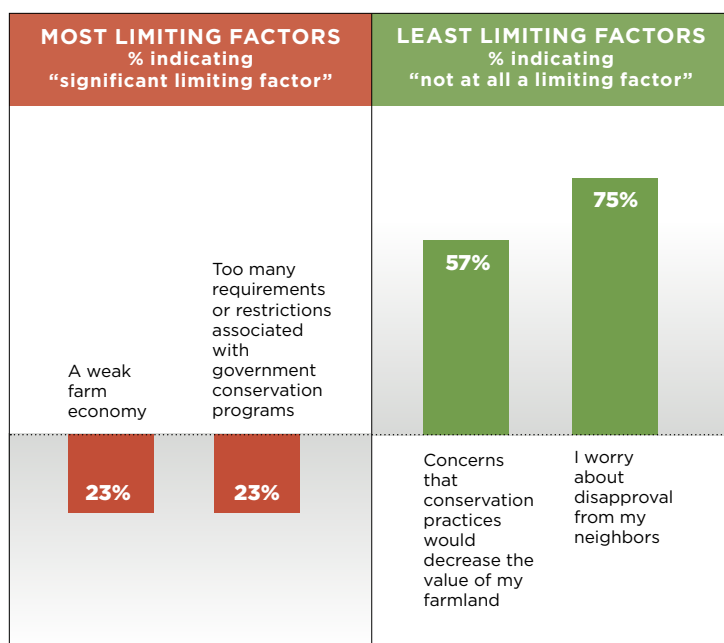

**Table 4. Sources & Needs for Information on Conservation**

MOST IMPORTANT SOURCES OF CONSERVATION INFORMATION	
My farm operator/lessee	71%
Local County Soil & Water Conservation District (SWCD)	64%
USDA Natural Resource Conservation Service (NRCS)	52%
State University Extension	51%
% INDICATING INTEREST IN RECEIVING INFORMATION AND/OR TECHNICAL ASSISTANCE	
Water quality improvement	41%
Soil fertility improvement	40%
Soil erosion control	36%
Government conservation programs	32%
% INDICATING INTEREST IN INTERVENTIONS (TOP 3 CHOICES)	
Having access to educational materials developed for non-operating landowners like you	31%
Having access to leasing tools that better account for costs, benefits, and timeliness of implementing conservation practices	24%
Working with a government agency in providing conservation services targeted to non-operating landowners	20%

Ohio NOLs were asked about 21 potential barriers to conservation that focused on economic (e.g. farm economy, profitability of farm, cost of practice); social (e.g. neighbors, no one else doing it); and knowledge factors (e.g. availability of information, lack of knowledge on my part, lack of knowledge on my farmer’s part). (Table 5)

While Ohio NOLs in our survey saw a weak farm economy and the number of requirements or restrictions associated with government conservation programs as their biggest barriers, very few worried about disapproval from their neighbors or that conservation practices would decrease the value of their farmland.

**Table 5. Barriers to Conservation on Their Rented Land**

Ohio NOLs were also asked to indicate their level of agreement with 14 statements focused on land management and their lease. (Table 6) All statements that received 50% or more NOLs agreeing are included here. The responses show that the respondents trust their operators and are comfortable changing the lease terms to include conservation practices.

**Table 6. Perceptions on Owner-Leaser Relationship**

I trust my operator to make good conservation decisions	93%
I am committed to my operator's continuation as a renter of my land	88%
I am comfortable extending the length of my operator's lease to facilitate implementation of conservation practices on my land	82%
I am comfortable asking my operator to use certain conservation practices on my land	78%
I am comfortable asking my operator to amend or make an addendum to our lease requiring conservation practices	69%
I would be willing to include lease provisions related to specific conservation practices (e.g. grassed waterways, no-till, adaptive nutrient management, cover crops, filter strips, and wildlife habitat)	52%

Ohio NOLs were also provided with 11 statements focused on factors they consider when making land management decisions, and they were asked to indicate their level of agreement with them (Table 7). All statements that received 50% or more NOLs agreeing are included here. The responses show a diversity of considerations are important to the landowner, including the environment, economics, their farm operator, the importance of keeping the land in farming, and local landowners and their community.

**Table 7. Factors Considered when Making Management Decisions (Level of Agreement)**

Keeping land in farming	91%
Soil quality	89%
Needs of the farm operator leasing my land	89%
Need for income from the land	82%
Future generations of my family	78%
Water quality	78%
The neighboring landowners	64%
Wildlife habitats	64%
The surrounding community(ies)	55%
Endangered species	50%

**SUPPORT AND ACKNOWLEDGMENTS**

*American Farmland Trust gratefully acknowledges funding and technical support from The Nature Conservancy; funding support from the Great Lakes Protection Fund and Rachel's Network; and technical support from the Non-operating Landowner work group.*

**CONCLUSION**

These findings and others from the survey can begin to help policymakers, natural resource agencies, and conservation groups understand how best to work with non-operating landowners to achieve more effective resource management of rented lands. Of the most important action items for Ohio, the results suggest:

1. There is a **high level of trust** in the farm operator and **willingness to make changes** to the lease, which may be an entry point for the operator to discuss with the landowner longer term leases to allow implementation of conservation practices, such as cover crops, that take longer than a year to pay off economically.
2. Landowners appear willing to make changes to the lease with their farm operators in ways that incorporate **conservation practices** and have expressed support for managing for **improved water and soil quality**. These findings point to another entry point for beginning conversations regarding lease changes that could benefit both parties and the land.
3. The desire by landowners to **keep the farmland in farming** reveals the symbolic importance of the land and provides a third entry point for conversations about the beneficial impacts of conservation practices on land for future family generations.

**American Farmland Trust**

For nearly 40 years, the mission of American Farmland Trust has been to protect farmland, promote sound farming practices, and keep farmers on the land. AFT is a leader in working side-by-side with farmers and landowners to accelerate adoption of conservation practices.
