

P-SHEC Update Log

User Update Summary

June 2026

Data coverage update:

During a recent quality review, we identified and corrected a data processing issue that affected a small number of counties in P-SHEC. This update affected only the winter wheat and barley datasets and did not affect any other crops or counties.

As a result of this correction:

- The total number of counties included in P-SHEC increased from 1,962 to 1,964.
- Eight counties were added to the winter wheat dataset and two counties to the barley dataset.

These changes are now reflected in the latest version of P-SHEC.

Recurring budget change plot update:

- The “By attribute” recurring budget change plot has been temporarily removed while it is being revised. The main recurring budget change summaries and plot remain available in the tool.

Drought results update:

- Improved drought handling for multiple-crop selections:
 - Crops without sufficient drought data remain visible in the drought table with a clear ‘insufficient data’ message.
 - Crops without sufficient drought data are not included in drought-adjusted revenue results in the Overall Results section.

Overall results update:

- Fixed the Overall Results section so that it will still display all other available results when drought data are missing for one or more selected crops.
